Reference Publications

Publication ID: [18244602](#)

Izhikevich EM.

Simple model of spiking neurons.

IEEE Trans Neural Netw 2003;14(6):1569-72.

The Neurosciences Inst., San Diego, CA, USA

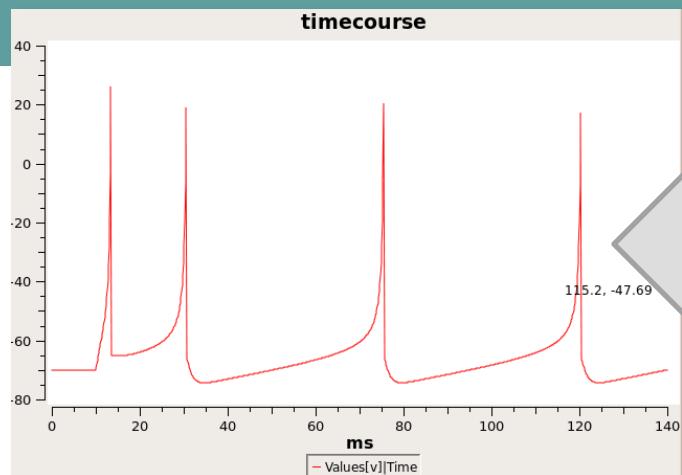

Fig.: Izhikevich (2003)

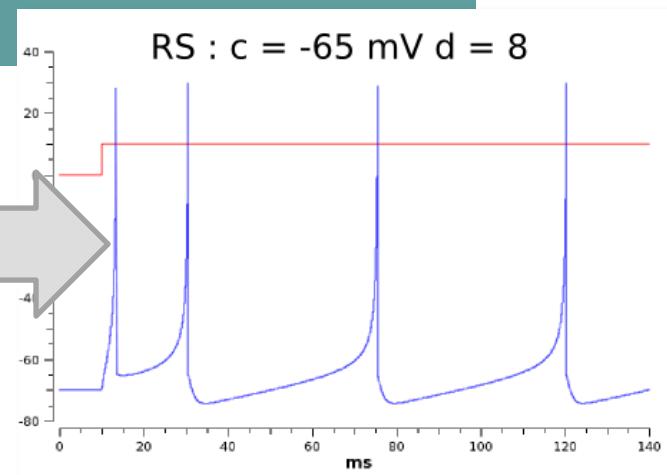

Fig.: COPASI simulation result

Use cases:

- Storing simulation experimental setups (“lab book”)
- Exchanging simulation experimental setups (collaborations)
- Using other people's simulation setups (published and standard models)
- Working with multiple simulation tools (import, export, re-import...)

Needs:

- Description of simulation setup
- Simulation algorithm
- Result data (?)
- Behavior of the model in a particular experiment

Standardization efforts to ensure result reproducibility

- Kinetic Simulation Algorithm Ontology (KiSAO)
- Terminology for the Description of Dynamics (TEDDY)
- Minimum Information About a Simulation Experiment (MIASE)
- Simulation Experiment Description Markup Language (SED-ML)
- Numerical Markup Language (NuML)

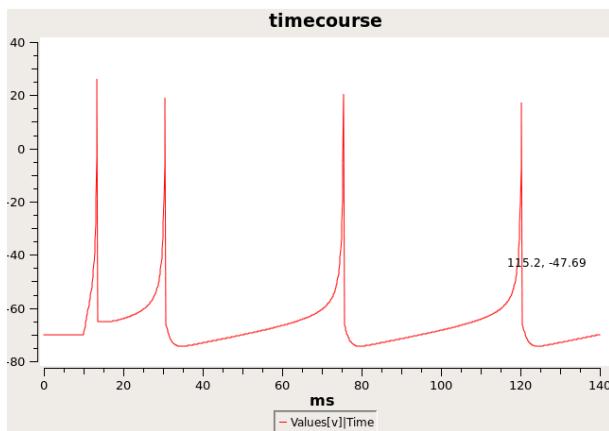

Fig.: Izhikevich (2003)

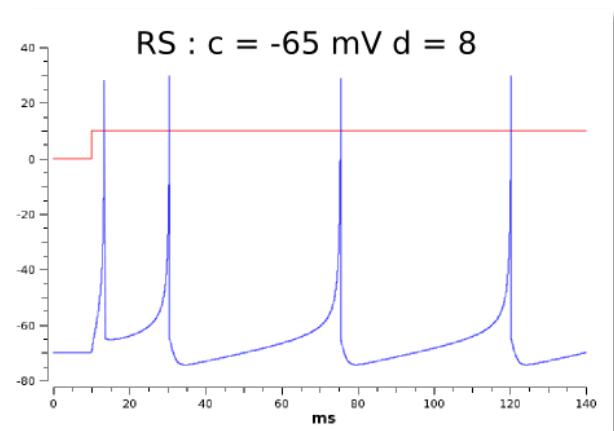

Fig.: COPASI simulation result

- Ontology for simulation algorithms used in computational biology
- OWL2 format
- <http://www.biomodels.net/kisao/>
- [biomodels-net-support @lists.sf.net](mailto:biomodels-net-support@lists.sf.net)
- Courtot et al., Molecular Systems Biology (2011)

Kinetic Simulation Algorithm Ontology

Jump To:

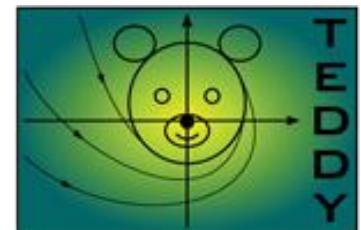

Details Visualization Notes (0) Term Mappings (0) Term Resources Terms ▾

modeling and simulation algorithm	Preferred Name	LSODA
modeling and simulation algorithm characteristic	Synonyms (<i>skos:altLabel</i>)	Livermore solver for ordinary differential equations with automatic method switching
hybridity	Definitions (<i>skos:definition</i>)	LSODA solves systems $dy/dt = f$ with a dense or banded Jacobian when the problem is stiff, but it automatically selects between non-stiff (Adams [http://identifiers.org/biomodels.kisao/KISAO_0000289]) and stiff (BDF [http://identifiers.org/biomodels.kisao/KISAO_0000288]) methods. It uses the non-stiff method initially, and dynamically monitors data in order to decide which method to use.
spatial description	ID	kisao:KISAO_0000088
symplecticness	Full Id	http://www.biomodels.net/kisao/KISAO#KISAO_0000088
type of domain geometry handling	Creator	dk
type of method	Label	LSODA
type of problem	See Also	http://identifiers.org/doi/10.1137/0904010 http://identifiers.org/isbn/978-0444866073 http://www.nea.fr/abs/html/uscd1227.html
type of progression time step	Alt Label	Livermore solver for ordinary differential equations with automatic method switching
type of solution	Definition	LSODA solves systems $dy/dt = f$ with a dense or banded Jacobian when the problem is stiff, but it automatically selects between non-stiff (Adams [http://identifiers.org/biomodels.kisao/KISAO_0000289]) and stiff (BDF [http://identifiers.org/biomodels.kisao/KISAO_0000288]) methods. It uses the non-stiff method initially, and dynamically monitors data in order to decide which method to use.
type of system behaviour	Disjoint With	LSODPK LSOIBT LSODI LSODES
type of variable		
modeling and simulation algorithm parameter		
clusterization parameter		
error control parameter		
granularity control parameter		
method switching control parameter		
number of N-way partial least squares regression factors		
number of partial least squares components		
partitioning control parameter		
type of validation		
variables preprocessing parameter

</model>
```

The screenshot shows a detailed view of a spiking neuron model in the Biomodels Database. At the top, the model ID is displayed as **BIOMD0000000127 - Izhikevich2003_SpikingNeuron**. Below this, there are download options for SBML and other formats, along with an 'Actions' button. The main interface is divided into several tabs: **Model** (which is active and highlighted in yellow), **Overview**, **Math**, and **Physical**. A **Reference Publications** section lists the source: Izhikevich EM. Simple model of spiking neurons. IEEE Trans Neural Netw 2003;14(6):1569-72. The Neurosciences Inst., San Diego, CA, USA. At the bottom, the **Publication ID** is given as [18244602](#).

```

SED-ML in model repositories.

An OpenCell 0.8 session file is available. SED-ML can also be used to simulate this model, the simulation description is in [Lorenz_1963_sedml.xml](#), and the simulation experiment can be run using the [SED-ML Web Tools](#). The figures below show the results from OpenCell and from using SED-ML.

- Changes at runtime
- Linking to experimental/simulation data - NuML
 - XML format
 - Standardized exchange of numerical results
 - <http://code.google.com/p/numl/>
 - <http://groups.google.com/group/numl-discuss/>
- Improved post-processing / working with > 1 models
- Nested simulations
- What else?

How to contribute to SED-ML

1. Have a look at the current SED-ML L1 V1.

Specification document on <http://sed-ml.org>

2. Try out some examples.

<http://sed-ml.org>, <http://sourceforge.net/projects/libsedml>

3. Identify what is missing for you to encode your simulation experimental setups.
What can you *not* express?

4. Submit a feature request & post it on the list.

feature request tracker: <http://sourceforge.net/projects/sed-ml>

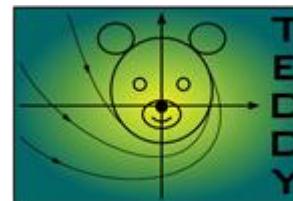

mailing list: sed-ml-discuss@lists.sourceforge.net

5. ... submit a proposal with example files and prototype.

proposal tracker: <http://sourceforge.net/projects/sed-ml>

Needs:

- Description of simulation setup
- Simulation algorithm
- Result data
- Behavior of the model in a particular experiment
